Datacenter products and services

Feeling the heat?

Manage critical temperature levels in your Datacenter with expert solutions from Media Recovery.

Reducing your cooling expenses and **improving inadequate airflow** are two of the biggest challenges you face in your Datacenter. Media Recovery simplifies those issues by providing you with highly effective traditional and customizable thermal management solutions.

We diagnose and assess your specific cooling issues to provide you with comprehensive product options that can solve even the most challenging temperature control issues you face every day, including: power reduction and **energy savings**, heat level reduction

within high-density server racks, **increased airflow** for hot aisle/cold aisle configurations, and more.

Find out more about our wide range of Datacenter Infrastructure Products, including: Power Management & Distribution, Remote Management, Command Consoles, Server & Modular Furniture, Cabling & Cable Management, Telecommunications, and Hardware & Peripherals. Media Recovery also offers Storage Media and Imaging Products.

Learn how to **cool your valuable equipment and facilities** with a free on-site analysis from Media Recovery. Benefit from expertise informed by decades of hands-on experience helping thousands of Datacenters. Please visit **www.mediarecovery.com/cooling** to learn more or request information.
